Super Reliable Printing, Cutting and Stacking

Worry-Free Printing, Cutting and Stacking.

Want to increase productivity and save money with your tag production system?

The Paxar 9860 Bar Code Ticketing System starts with the Paxar 9860 printer. It features "best-in-class" sub-second imaging time due to its 150 MHz processor, long ribbon and supply rolls for fewer stops to reload, and the ability to print clear, crisp hang tags up to 12 mils thickness. In addition, you get an integrated heavy-duty knife that cuts 12 mil tags at up to 8 inches per second!

Fast imaging and cutting increases your productivity. The knife also cuts up to 10 million tags before you have to change it! *Fewer knife changes save you money.*

Peace-of-Mind Performance.

Our new Paxar 938 Verifier option for the Paxar 9860 Bar Code Ticketing System provides you with peace-of-mind performance. With the ability to back up the printer and overprint bad tags or labels you can ensure bad tags will **NOT** be used! Coupled with the Paxar 9860 Bar Code Ticketing printer, tags and labels can be verified at up to 8 inches per second.

We set the "Standard for Accessories."

Not only does the Paxar 9860 Tabletop Bar Code Ticketing System feature an integrated, super-reliable knife, this system also comes standard with an ultra rugged metal cover and new user friendly keyboard. The 939 Keyboard makes off-line data entry a breeze!

Designed for the retail supply chain customers' need to enter both alpha and numeric data, the 939 Keyboard features a full QWERTY layout with separate calculator numeric keys.

Full Range of Connectivity.

Stay connected with the leading edge technology provided by the Paxar 9860 Tabletop Bar Code Ticketing System. Standard connectivity includes serial, parallel, and USB (Universal Serial Bus) ports. You can upgrade to enhanced PaxarNet II Ethernet Print Server or twinax/coax functions.

With PaxarNet II, you control all of your Paxar 9855 and 9860 printers, anywhere in the world, from a central location. You can even receive email alerts when printers need attention at a remote location.

PaxarNet II also supports our new Dual Wireless 802.11b and Wired Ethernet network interface card. This capability allows your printers to run in a wireless network, but allows you to instantly change to a wired connection if your wireless network becomes overloaded.

OTHER 9860 OPTIONS INCLUDE:

- ✓ 300 dpi
- ✓ 932 Stacker
- ✓ 938 Verifier
- ✓ ADK Script programming for special applications
- ✓ 16 MB SDRAM Memory Expansion
